#### **WHAT IS FACTORING**

Factoring is an agreement under which the Factoring company purchases and/or manages receivables, generally of a commercial nature, due to the Client by a predefined set of debtors with the possibility of obtaining advance payment, in whole or in part, for those receivables, or to obtain the assumption of the risk of non-payment due to the insolvency of the debtors.

Financial and non-financial services that form factoring also include the assessment of client reliability.

##### **Maturity Factoring**

A factoring transaction that involves the payment of the consideration on a date mutually agreed between the Client and the Factoring company. The date may be either the same as the due dates of the assigned receivables or a later one.

The Factoring company may grant assigned debtors with extended payment terms, for a consideration, compared to the maturity of the receivables assigned.

Maturity factoring can be with or without recourse.

Through this service, the Client reduces the internal costs of managing its trade receivables, schedules the collection flows, obtains - in case of non-recourse - the guarantee of payment from the Factoring company and has a source of financing.

### **Risks on the Client**

The Client guarantees the existence of the receivables assigned, and the possibility for the Factoring company to collect these receivables, and takes on any disputes with the assigned debtor. The Client assumes the obligations provided for in the factoring agreement.

The main risks include what follows:

- possible unfavorable changes in the economic conditions, as contractually provided;
- an increase in the interest rate in connection with the performance of the benchmark, when the transaction is a variable rate transaction;
- the presence in the agreement of a fixed minimum rate (the so-called floor rate), so that if the algebraic sum of the indexing parameter and the spread is lower than this floor rate, the interest rate cannot be lower than this floor rate in any case;
- in case of recourse, if the assigned debtors do not pay, returning the sums advanced by the Factoring company as a consideration for the receivables assigned, in addition to the extension charges, to the Factoring company.
